

We are pleased to provide you our list of latest enhancements for your newest Mandarin M5 V5.8.0 below

### Catalog:

- **NEW MOBILE INTERFACE.** Mandarin M5 is now a responsive website providing proper rendering so your students and patrons search your catalog from anywhere using their mobile phone. Simply access your Mandarin M5 site and search your catalog. This is our first release so stay tuned for more improvements. In addition, we have made a series of minor User Interface improvements associated with this change. Due to those improvements you may need to use the Shift F5 (Chrome) or press CMD and Shift and R (Mac) to refresh your M5 site after we upgrade your M5 installation.
- Visual Search will now expand properly if it is the default search on a new catalog session.
- In Visual Search configuration, it is now possible to move components that lack a topic (label).
- You can now attach pictures to records from the My List view.

### Advanced Cataloging:

- **ENHANCEMENT.** Holdings can now belong to more than one Collection.

- In Export, an issue that could result in only one record being included in the export file has been addressed.

**Record Editor:**

- An issue that could cause multiple detached barcode records while editing patrons has been corrected.
- When purging bibliographic records, an issue that prevented all but the first barcode record being purged has been resolved.

We continue to add new requested features and genuinely appreciate all of the feedback from our librarians around the world.

We hope these new Mandarin M5 features enhance your and your patrons' experience.

Please keep your suggestions coming and as always, we appreciate your ongoing support.
